

## **Spring Vaccination Protocols ... What Works for Your Herd?**

The products listed below are what each clinic stocks in its coolers.  
If you know of a product you use and we do not carry it on hand we can order it in  
for you.

Please let us know in advance so we can have your product ready when you are  
ready to work cattle!

Short list of questions to ask and answer to find what works best for you and your  
program...

What have you done in the past? Does it work?

Have you had any abortions in bred cows?

Are you cows currently eating out of bunk lines, tires, off the ground, bottomless bunks?

Do you normally run a course of antibiotics through your cows prior to calving?

How are your calving pens? Dry & dusty? Wet & muddy?

Do you vaccinate your cow herd prior to turnout? Modified Live or Killed?

Do you work calves at birth &/or at turnout? Or both?

What's the weather doing/going to do? (We know sometimes this is a variable that is a guessing game!)

Have you lost calves to scours?

Have you lost calves to pneumonia?

Have you lost calves to over-eating?

Have you lost calves to Type A?

Do you usually treat calves that are on pasture?

Has there been anything diagnosed on your ranch? Or any of your pastures?

# Calves

## Clostridials (Seven way)

- Alpha C & D
- Ultrabac 7
- Ultrabac 7 with Somnus
- Vision 7
- Vision 7 with Somnus
- Covexin 8
- Type A
- Dr. Nold's Implant

## Somnus
