

Fall Vaccination Protocols ... What Works for Your Herd?

The products listed below are what each clinic stocks in its coolers.
If you know of a product you use and we do not carry it on hand we can order it in
for you.

Please let us know in advance so we can have your product ready when you are
ready to work cattle!

Short list of questions to ask and answer to find what works best for you and your
program...

What have you done in the past? Does it work?

Do you vaccinate your cow herd? Modified Live or Killed?

Do you work calves on pasture & leave them on the cow?

Do you work calves when you wean?

Do you sell off the cow or background your own calves?

Do you fence-line wean?

Do you use quiet wean rings?

Do you wean off the cow?

How are your lots? Dry & dusty? Wet & muddy?

What's the weather doing/going to do? (We know sometimes this is a variable that is a guessing game!)

Do you usually treat calves that have been weaned?

Have you lost calves that have been weaned? Has there been anything diagnosed on your ranch?

Calves

Clostridials (Seven way)

- Ultrabac 7
- Ultrabac 7 with Somnus
